Description Technical Related Products

Aduro H1 combines efficient heating from wood pellets and the cosiness of a real fire with wood. Enjoy the dancing flames and the warm atmosphere when firing with logs, or let the stove burn overnight with pellets, or heat the house when you are not at home.

The large glass area provides a 180-degree view of the flames, and with the elegant handles, the stove is given a light and modern expression. The pellet container is placed underneath the combustion chamber for easy and convenient filling of wood pellets, and it can hold approx. 13 kg of pellets.

With Aduro H1 you will have:

- Controlled manually or via smartphone
- Programming options with weekly program and temperature control
- Can start on its own and maintain room temperature
- Possibility for external air supply
- Automatically supply of air due to the [Aduro-tronic automatic](#)
- Aduro H1 previously won the [European Business Award for the Environment](#) in the category "Sustainable products and services"
- [Patented solution](#)

For Aduro H1, you can buy a [special floor hearth](#) in two parts, of which one part is put in front of the stove and can easily be removed and cleaned on both sides. It is also possible to buy a decorative [top plate](#) in soapstone or limestone, which creates a beautiful contrast to the black stove and retains the heat for a long time.
